

DAVRIAN IMP

a new concept in GT motoring

The Davrian Imp provides the first opportunity for the enthusiast to construct his own high-performance vehicle using sophisticated components at extremely low cost.

A modest £275 buys a beautiful monocoque/chassis unit complete with hardtop, doors, windscreen, hinges, rear window and perspex quarter lights. A further outlay in the region of £50 for a suitably-damaged Imp will provide all that is needed to complete this very desirable motor car.

This is **real** economy in GT motoring.

After some three years' development the Davrian Imp has been designed and manufactured bearing in mind simplicity, economy and performance. It is supplied as a monocoque body/chassis unit built of Glass Reinforced Plastic and complete with doors, windscreen, rear window, quarter lights and detachable hardtop. Two basic structures are bonded together to give an immensely-strong and impact-resistant monocoque incorporating contoured seats, suspension and engine mountings, recessed lights and ducting to accommodate water pipes and wiring. Bonnet, boot-lid and doors are supplied complete with hinges and the detachable hardtop allows the owner to enjoy both closed and open motoring.

All the mechanical components required to put the Davrian Imp on the road can be obtained from a suitably-damaged Hillman Imp (or derivative) with little or no alteration.

Some enthusiasts may require to carry out further modifications, and items can be supplied to permit improved suspension: a twin braking system: front-mounted radiator: more engine power etc.

DIMENSIONS

Length Overall	11' 9"
Width	5' 0"
Height	3' 4"
Road Weight	9 cwt approx
Ground Clearance	5" (standard)

PERFORMANCE

with standard engine

Top Speed	95 mph
Acceleration	0-60 mph in 17 secs

with Imp sports engine

Top Speed	110 mph
Acceleration	0-60 mph in 10.5 secs

A comprehensive range of extras is available; a mid-engined version is under development and will shortly be available; a racing version of ultra-light weight can be supplied.

CREDIT FACILITIES CAN BE ARRANGED
